1. Prolog: Introducing „InForm: FabricNews“

Dear reader,

you are keeping in your hands the announcement of the newsletter named "InForm". The release of the bimonthly newsletter will be after the Techtextil Fair. We are proud to introduce our "online guide" to support the designer in explaining highly technical concepts in an easy-to-understand manner.

InForm will provide the following topics: Architecture membrane, design, Engineering approaches, Fabric Artwork, Project Knowledge, Material Development, Concepts of Details, Software Tools and Project Reviews.

2. News, Announcements

The leading International Trade Fair for Technical Textiles and Nonwovens **techtextil** will open its doors from 16. - 18- 06. 2009 in Frankfurt and we invite you to join our two booths in hall **3.1**:

3.1 J71 Infopoint of leichtbaukunst / formfinder:

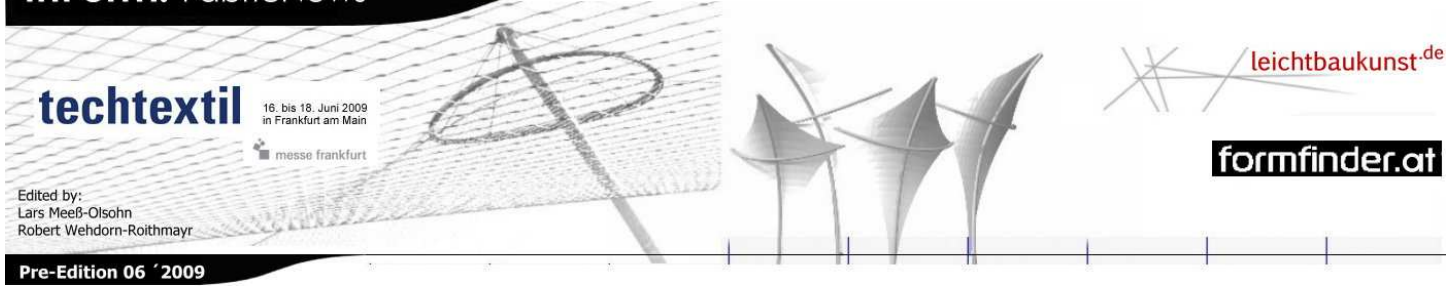

On our 27 m long stand you find specialists of e.g. production, manufacturing, applying, design, developing and engineering of fabric architecture and structures giving insides in their work and projects, please also join

3.1 J88 Fabric-Art-Lounge PULSAR of Lars Meeß-Olsohn / Jens J. Meyer

A chilly spot to enjoy on spacey lounge-seats placed in an atmospheric surrounding of cosmic sounds, future light-objects and a lit installation of textiles – take a seat!

Pre-Edition 06 '2009

Both of the stands belong to the special-areas of the fair, so-called "Sonderschauen" that are different to the other booths. Here information and a special atmosphere enrich the show for the guests and clients.

Information and Competency, the key-words of the concept of **3.1 J71** Infopoint indicates the claims: Here the application, the material and the planning of textile architecture is presented to interested architects, designers, engineers and companies giving an overview of that specific building method. We like to inform you or other people, which have a certain project or a vision to realize, such as roofing, canopies or solar shadings, XXL-printed facades, interior/exterior light-objects and furniture, ceilings or just great artistic installations.

Short presentations via plasma screen and applied materials on tensile objects as kite-like displays will provide information and lead to discussions forming a deeper understanding of the chances of projects and visions.

Organized by the design-office **leichtbaukunst**, Velbert-Langenberg, and the software generating office **formfinder**, Vienna, many aspects of fabric-structures will be presented by experienced specialists

Lectures at our Infopoint

Tuesday June 16th 2009
